RESIDENTIAL HOMES | GRANNY FLATS

Every job custom designed

We don't just sell you standard plans out of a book. They're just the starting point. We customise our plans to exactly what you need.

We make it easy

That's what we're about - making it easy for you. We take all the hassle out of it. From start to finish. Designs, right through to connecting it up on site... we make it all easy.

25 years of experience

With 25 years experience and a team of over 100 hard workers we have what it takes to get the job done.

# Why Choose Modular?

## Construction in all weather conditions

It's impossible to control the weather. Even if your building project is small, you'll still face delays due to the weather. By using factory-built modular homes, most of the building process takes place within our factory's controlled environment. Consequently, we can accurately predict when your building will be completed with 100% accuracy.

## The battle for tradespeople

It's a common sight to see no activity on a home building site, as tradespeople often wait for others to finish their work. For instance, the plumber may be waiting for the tiler, who's waiting on the painter and the builder might forget to inform the painter that the carpenter's job is done. There are many reasons, or excuses, for the lack of progress.

At our factory, we have control over the various trades because they're all our employed staff. By efficiently scheduling tasks to overlap, we're able to minimise the build time. This is why we're able to construct a 4 bedroom home, a cabin or granny flat in only 21 days. We handle all internal works and finishes before delivering the final product to your site.

## Fixed price contracts

Builders may offer you a price, but how many loopholes are hidden in their contracts? Building on-site can lead to unexpected surprises, which means additional expenses. However, building within our factory eliminates many unknowns and enables us to offer you a fixed price contract without any ifs, ands, or buts.

## The value of time

When considering the cost of construction, have you factored in the time-saving benefits of building with modular instead of on-site? Following council approval, an on-site builder may take 6-8 months to complete an average-sized home. However, a factory-built home could reduce this time by half to just 3-4 months from council approval. That's a time-saving of 3-4 months! What does this mean to you? Perhaps it's savings on rent or, if you're an investor, a quicker turnaround time to start earning returns on your investment.

# Your Dream Home: Fast, Affordable, Uniquely Yours

Designing and building a new home is an exciting journey. The process of creating your dream home can be overwhelming, but with the right team of professionals, it can also be a rewarding experience.

At Uniplan, we take pride in our ability to create beautiful homes that are fast and affordable to build. Each home is built in our factory, ensuring strict quality control and outstanding attention to detail.

Imagine walking into a new home built to your own needs, style and layout. Every detail of the house tailored to your preferences, from the colour of the walls to the type of flooring. It's an opportunity to create a living space that is uniquely yours.

With 25 years of experience in the building industry, our accomplished team are on hand to help you every step of the way. We offer a range of designs that can be customised to suit your individual needs and give you the ability to have as much or as little input as you wish.

We can deliver to almost any site in NSW.

## Selections Guide

Our Selections Guide is the perfect place to start when it comes to customising your interior and exterior spaces. We offer a wide range of colours and finishes that cater to different preferences and styles.

# Your Journey with Uniplan

## 1. Exploring possibilities

At Uniplan, we believe in establishing a strong foundation for our partnership. During your initial inquiry, our dedicated team focuses on understanding your needs and providing valuable insights. We prioritise building a relationship where you feel comfortable and confident that Uniplan is the right fit for your dream home within your budget.

## 2. Site or display visit

To delve deeper into your requirements, we offer the opportunity for you to visit our factory and displays or arrange a site visit for us to better understand your project. This phase involves detailed discussions on sketch plans tailored to your site, customer selections for internal and external inclusions, and the presentation of an 'Indicative Price.' This transparent step allows you to evaluate if Uniplan aligns seamlessly with your project.

## 3. Initial investment

Upon mutual agreement to proceed, an 'Initial Investment' of \$2500 initiates a comprehensive exploration of your project. Our design and drafting team meticulously develops fully detailed plans, elevations, and 3D views, while also providing options for colours and finishes. Simultaneously, early discussions with the council take place to identify their specific requirements.

## 4. Contract stage

By Steps 1–3, you gain absolute certainty that Uniplan comprehensively understands your project. We present you with a fixed-price contract and detailed plans. Your final step is to sign your acceptance, allowing us to move forward with the execution of your project.

## 5. Council process

Our approach to the council process is designed to streamline the journey, minimise delays and ensure a smooth progression toward making your dream home a reality. We keep you well-informed and actively involved throughout this phase, ensuring a successful outcome.

## 6. Construction

Upon obtaining council approval, your build is scheduled into production. The entire process involves 21 stations, with each station taking a day to complete their assigned work. This enables us to build an entire home, in just 21 days! Our team then coordinates the delivery, site works and installation of your fully finished home.

## 7. Moving into your new home

Welcome home! Step into your thoughtfully designed and expertly built Uniplan home.

# Frequently Asked Questions

Here's a list of our frequently asked questions. If your question isn't there, feel free to call our team.

## What is included in your pricing?

Pretty much everything — just connect your services and move in! We make it easy for you. All homes, once completed, are delivered to site and installed. They come with a standard internal fit-out that includes a bathroom, a kitchen, floor, wall and window coverings, and painting. And bedrooms, of course. You're also welcome to discuss particular requirements you'd like us to include.

## Is there an extra charge if we don't go with your standard plans?

Definitely not; it's very rare that we build a standard plan, as we're always customising for our clients. We have designed our factory to allow us to customise homes efficiently. They can be built to your design or to the plan we have devised just for you. Either way, the same costing formulas are used to calculate the final price.

## What is the payment plan?

We ask for a 10% deposit, 40% at the factory lock-up stage and 40% when your cabin is ready for delivery. The final 10% is paid on completion of on-site work when you're happy with the job.

## Do you offer finance?

We don't offer finance, but we can provide a list of lenders and mortgage brokers who understand our construction methods. Just ask our sales staff for details.

## Do you look after the council process?

To start the council process you will be invoiced \$7500, refer to Council Application Forms for more information. Once paid, our experienced team will lodge your application with the council, complete with drawings and forms, and then manage it from start to finish. You'll be kept informed throughout the process. Please note that council fees are not included in our costs as these vary from one local government area to another.

## What is your warranty?

We provide a six-year structural warranty plus a 1-year maintenance period.

## Why should we buy from you?

We offer a quick, cost-effective building experience. For the last 25 years, we've been finding new ways to make the process as easy as possible. From council applications to colour choices and site works, we've made choosing your home a hassle-free experience.

## How do they get installed on-site?

Homes are mounted using concrete piers, steel posts or solid concrete block footings and tie-down chains, all of which are included in our price. We can upgrade to increased footing sizes depending on your soil type. Our team can help you make the best choice for your site.

## How long will it take to build?

Schedule permitting, a single module can be built in as little as 21 days, thanks to the production line process employed at our factory. Ask us about a factory tour to see how it's all done.

## What is the lead time from order to delivery?

Lead times are determined by our work schedule and the length of your council's approval process. Once these are aligned, delivery takes 8 to 16 weeks.

## What needs to be done after delivery?

After delivery to site, our tradespeople will install piers and complete any touch-ups required after transport. We will build verandahs, stairs or carports as per your contract. All you need to do is arrange for the connection of services and once your plumber and electrician have finished, you can move in!

# Delivery and Installation

With our experienced team and specialised wide load trucks, we can access almost any site no matter how difficult the access may seem, something that only professionals with years of experience can do!

We fit special wheels under the building in order to remove it from the truck and wheel it into position and if your site is sloping or has difficult access, we may need to use a crane. Along with the delivery, we also arrange the concrete footing, piers and tie-downs for added security.

We understand that not every delivery is a walk in the park. Flood zones, difficult access, sloping sites, elevated piers, we've done them all.

Talk to us today.

## We are specialists in regional sites

A modular build is the ideal way to go for regional, remote and rural sites since it eliminates the need for costly on-site construction. Having to drive out to a regional site every day and incur extra expenses for every delivery is eliminated in factory building. We offer a more cost-effective solution with no compromise on quality and provide convenience and flexibility when it comes to delivery.

# A Greener Building Choice

Are you aware that modular building is the most eco-friendly method of construction? Modular building has an 80% reduction in waste compared to traditional building methods, resulting in less site disturbance and zero emissions during construction. Uniplan ensures that all their builds are planned and designed with the environment in mind.

## Steel framing

We use steel framing which eliminates worries about structural damage caused by insects, water, fire or transportation. Steel is an eco-friendly choice as it is fully recyclable and has an infinite lifespan, making it the most recycled material globally.

## Water conservation

Implementing water-saving tapware is essential in reducing water consumption. Many tapware manufacturers offer water-saving showerheads that not only provide a superior shower experience but also consume less water. Remember – every drop counts.

## Solar access and orientation

This simple yet often overlooked aspect makes a huge difference to heating, cooling and user comfort. By strategically aligning new buildings to optimise solar advantages, the need for winter heating and summer cooling is reduced. Every site is unique, that's why we carefully tailor designs to your location.

## Insulation

Investing in better insulation is a wise decision that will yield long-term benefits including significantly reducing heating and cooling costs. To ensure effective insulation, it is essential to safeguard the entire building envelope, which encompasses the walls, roof, floor and windows.

## Energy efficiency

With energy costs continually on the rise, minimising consumption is an effective approach to significantly decreasing operating expenses. The latest advancements in LED lighting present reasonably-priced options that decrease power usage by up to 90%, making them an excellent alternative.

## Waste reduction

We actively promote LEAN construction methods to dramatically minimise waste. By utilising efficient procurement of materials and highly efficient production practices we can significantly reduce the amount of waste going to landfill and pass on the cost savings to our customers.

GRANNY FLATS

Abbott

1  | 1  | 1 

This cosy retreat offers exceptional comfort. With one bedroom, open-plan living and a spacious deck, it's the perfect choice for a granny flat.
